

## Try these games at home for more practice!

1. Write the numbers 1-6 on a piece of paper. Roll a die, count the dots, and circle the matching number on your paper. Play until you have circled all numbers.

2. Write the numbers 1-6 on separate pieces of paper and lay the papers on the floor. Roll a die, count the dots, and stand on the matching number. BONUS: Use different colors and shapes of paper for more practice! Name the color/shape of the paper when you stand on it.

3. Draw ten boxes with chalk outside and write the numbers 1-10 in the boxes. Find nature items (such as acorns, leaves, or pinecones) to fill each box by matching the number.

4. Play Hopscotch. Make sure the child reads the number s/he lands on!

5. Play “Run and Count.” Write the numbers 1-10 on ten index cards or papers and stick them to wooden dowels or sticks with a clothespin stuck to each card (you can also just lay the cards on the ground if you don’t have sticks). Draw pictures or place stickers on ten different papers or index cards to match the numbers 1-10 and give those cards to your child. When you say GO your child will count the pictures/stickers on each card, run around the yard to find the matching number, and clip his or her card to the number card.

6. Play “Number Line Run.” Draw a number line from 1-10 in chalk outside with the numbers spread out. Set a timer for 5-10 seconds and when you say GO, your child will run until time runs out and you say STOP. Have your child tell you what number s/he lands on. If your child is a fast runner, spread the number line out further!

7. Go on a number hunt. Write the numbers 1-10 on popsicle sticks and hide them around your yard outside. Have your child find the sticks and read the numbers. For an extra challenge, have your child lay them out in order as s/he finds them.

8. Match numbered cars to parking lot spaces. Draw a parking lot on a piece of paper with ten spaces and use stickers to show the numbers 1-10 (or print this [Parking Lot PDF](#)). Write numbers on toy cars (or place numbered stickers on them). Have your child drive each car into the spot matching the number on the car.

9. Play Number Memory.
